

Applicant : William A. Sirignano  
Appl. No. : 10/766,132  
Examiner : Sarah Sachie Clark  
Docket No. : 703538.4032

### **Amendments to the Claims**

This listing of claims will replace all prior versions and listings of claims in the application:

1. (currently amended) A miniature combustor comprising:  
a chamber having first and second ends,  
a liquid-fuel inlet into the chamber, ~~and~~  
a gas inlet formed in a first end of the chamber, and  
a means for forming a liquid film on the chamber's interior surface,  
wherein the chamber having a lateral dimension transverse to a major flow direction within the chamber that is sub-centimeter.
2. (original) The combustor of claim 1 wherein the lateral dimension is in a range of about 1.0 to 3.0 millimeters.
3. (original) The combustor of claim 1 wherein the chamber is generally cylindrical.
4. (original) The combustor of claim 1 wherein the length of the chamber is in a range of about 1.0 to 10.0 centimeters.
5. (original) The combustor of claim 1 wherein the liquid-fuel inlet comprises a fuel injector oriented to eject fuel onto a surface within the chamber.

Applicant : William A. Sirignano  
Appl. No. : 10/766,132  
Examiner : Sarah Sachie Clark  
Docket No. : 703538.4032

6. (original) The combustor of claim 1 wherein the liquid-fuel inlet comprises at least a portion of a chamber wall formed of a porous material.

7. (original) The combustor of claim 1 wherein the liquid-fuel inlet comprises a plurality of orifices.

8. (previously presented) The combustor of claim 7,8 further comprising a plurality of liquid fuel injectors, each coupled to one of the plurality of orifices and oriented tangentially to a wall of the chamber and orthogonally to the major flow direction within the chamber.

9. (original) The combustor of claim 8 wherein the plurality of liquid fuel injectors comprise first and second set of injectors wherein the first and second set of injectors are symmetrically opposed about the chamber.

10. (original) The combustor of claim 1 further comprising a swirl generator.

11. (original) The combustor of claim 10 wherein the swirl generator comprises a swirler positioned within the chamber adjacent the first end.

12. (original) The combustor of claim 10 wherein the swirl generator comprises a plurality of gas inlets tangentially coupled to the chamber adjacent the first end of the chamber.

Applicant : William A. Sirignano  
Appl. No. : 10/766,132  
Examiner : Sarah Sachie Clark  
Docket No. : 703538.4032

13-14. (cancelled)

15. (previously presented) A combustion process comprising the steps of  
injecting liquid into a combustion chamber, wherein the chamber has a lateral dimension  
transverse to a major flow direction within the chamber that is sub-centimeter,  
forming and maintaining a liquid film over substantially an entire interior surface of the  
chamber,  
injecting an oxidizing gas into the chamber, and  
burning an oxidizing gas and fuel mixture within the chamber.

16. (original) The method of claim 15 wherein the liquid is a fuel.

17. (previously presented) The method of claim 16 wherein the liquid is an inert liquid  
and the fuel mixture comprises a gaseous fuel.

18. (cancelled)

19. (previously presented) The method of claim 15 further comprising the step of  
swirling the oxidizing gas.

Applicant : William A. Sirignano  
Appl. No. : 10/766,132  
Examiner : Sarah Sachie Clark  
Docket No. : 703538.4032

20. (original) The method of claim 15 wherein the step of forming and maintaining a liquid film over substantially an entire interior surface of the chamber, includes reducing combustion heat losses to walls of the chamber.

21. (original) The method of claim 15 wherein the step of injecting an oxidizing gas includes injecting the oxidizing gas axially into the chamber and swirling the axially in-flowing gas by passing it through a swirl generator positioned adjacent to an inlet of the chamber.

22-23. (cancelled)

24. (New) The method of claim 15 wherein the step of forming and maintaining a liquid film over substantially an entire interior surface of the chamber, includes spreading the liquid film over surface of the chamber due to a force field.

25. (New) The method of claim 14 wherein the force field is an electric field on a charged liquid.
